

Emergency Dialer

Wired
Autodialer

Wireless
Autodialer

This is automatic calling system. This device is used for information on remote location via wired telephone or mobile. So for the operation of Device (Dialer) connected to the security system. some security products comes with inbuilt dialer.

Both kind of dialer receive trigger from security/fire alarm panel. In case of emergency the dialer automatically dial pre-stored no. & play recorded VOICE message. These voice message and no. stored at the time of installation. Dialer device has in built erasable memory. So store/ recording can be changed as desired by user. The memory can re-write approx ten thousand times.

There are two types dialer:-

A) Wired Dialer:- These dialer work on land line telephone system.

B) Wireless Dialer :- These dialer works on GSM based (SIM card) phone network.

There is detail of stand alone dialer.
